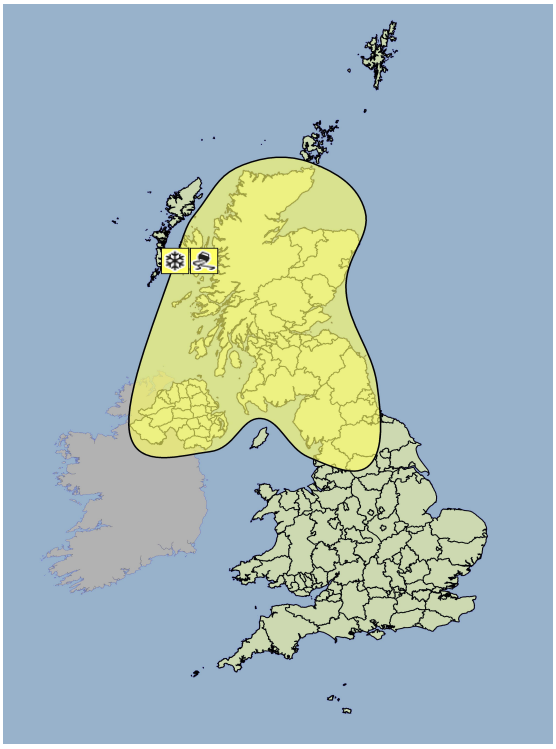
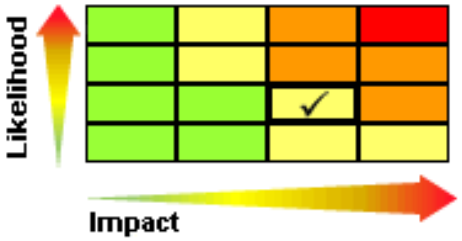
National Severe Weather Warning Service





Chief Forecasters Assessment
The cold, unstable airmass will persist across Scotland, Northern Ireland and northern England with snow showers falling to low levels. On Tuesday night a more organised area of showery precipitation is likely to affect Scotland, which has the potential to produce snow at low levels, including the Central Belt - see separate Amber warning. Ice is also likely to be a hazard again on Tuesday night.

This warning will be kept under review and updated as and when necessary.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **22:05 on Tue, 13th Jan 2015** until **12:00 on Wed, 14th Jan 2015**

Frequent showers of sleet and snow will affect Scotland, Northern Ireland and northern England through Tuesday night. Further accumulations of 2-5 cm of snow are likely above about 100 m, but also to low levels locally, and more widely over the northern half of Scotland and the northwest of Northern Ireland, where a further 10 cm or more is likely above 200 m. Icy patches are likely to develop as well. Hail and lightning will be additional hazards, especially close to western coasts.

Meanwhile, a more persistent spell of snow may settle at low levels across Scotland on Tuesday night and into Wednesday morning - see separate Amber warning.

The public should be aware of the risk of disruption to transport.

This is an update to extend the Yellow warning area further south across the rest of Northern Ireland.
